

DIEGO HUNG

Systems Engineer | Full Stack Developer | Building Scalable Solutions with TypeScript, Angular, and Node.js Caracas, Venezuela • Available for global remote work
(58) 412-3288449 | diego.hung.dh@gmail.com | <https://dev-dhung.github.io/>

Professional Summary

My focus centers on transforming complex requirements into digital products that not only work but are also easy to maintain and scale. I prioritize clean architecture and performance, ensuring that every technical solution contributes to long-term system stability.

I have worked in high-demand environments—ranging from telecommunications to mobile application development—giving me an end-to-end vision to solve technical problems from multiple angles. My workflow integrates Generative AI tools, allowing me to optimize development cycles and raise delivery standards without compromising code quality.

Education and Certifications

- **B.S. in Systems Engineering** | UNEXCA (2024 - Present)
 - **Associate Degree in Computer Science** | IUGT (2019 - 2022)
 - **Node.js: Zero to Expert** | Udemy (2023)
 - **MCSA: Web Applications** | Lourtec (2020)
-

Technical Skills

- **Frontend:** Angular (12-19), React, RxJS, Redux, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3.
 - **Backend & APIs:** Node.js, PHP, Java, Python, REST APIs.
 - **Mobile & Multiplatform:** Flutter, Ionic, BrightScript (Roku), Android TV.
 - **Databases:** MySQL, MongoDB.
 - **Tools & Architecture:** Clean Architecture, Git, Posthog, Agile Methodologies.
 - **Languages:** Spanish (Native), English (B2).
-

Work Experience

Frontend Developer | Magnetic

March 2025 – March 2026

- Executed the strategic migration of legacy modules toward an Angular 19 architecture, reducing technical debt by 20% and improving product scalability.
- Optimized platform performance by refactoring complex data streams with RxJS and Redux, eliminating bottlenecks in asynchronous state management.
- Designed and integrated modules based on Generative AI for internal process automation, reducing operational time in administrative tasks.
- Developed high-fidelity interfaces using Tailwind CSS to ensure a consistent user experience, integrating telemetric tools like Posthog for data-driven decisions.

Frontend Developer | Tikket

March 2024 – March 2025

- Developed and optimized reusable user interface components using the JavaScript and TypeScript ecosystem, ensuring the platform's visual consistency.
- Collaborated with design and product teams to transform wireframes and functional requirements into high-performance interactive web applications.
- Implemented frontend development best practices, guaranteeing cross-browser compatibility and fluid responsive design.

Full Stack Developer | Fibex

March 2022 – March 2024

- Executed the full development lifecycle of the streaming application for Roku (BrightScript) and Android TV, successfully digitizing TV services for thousands of subscribers.
- Designed and deployed cross-platform mobile applications using Flutter and Ionic, integrating geolocation services and payment gateways to optimize field operations.
- Developed and maintained robust APIs in Node.js and PHP, ensuring data integrity, speed, and security in communication between core systems and front-end interfaces.

Technology Analyst | Banco del Tesoro

March 2017 – March 2022

- Provided technical support and critical maintenance for financial processes within the core banking system using AS/400 (RPG), guaranteeing data integrity and operational continuity.
- Monitored and optimized collection services and electronic payment channels, ensuring optimal response times in high-availability transactional systems.
